34

SO WHAT DOES THIS ALL ADD UP TO?

• ACKNOWLEDGEMENTS •

Bloomberg Philanthropies and Innovation Unit would like to extend sincere thanks to the ISOS Partnership and the Institute for Excellence in Government for their help compiling this report.

We would also like to extend a special thanks to the teams in the ten winning Mayors Challenge cities, who shared their stories and insights so generously with us.

• INTRODUCTION •

The Mayors Challenge encourages cities to generate bold new ideas that solve urban challenges and improve city life – and have the potential to spread.

The competition invites hundreds of cities to define a serious problem and to develop bold, new ideas to solve it. Cities submit an initial application with their best idea.

During the second stage, selected cities advance as finalists and receive coaching and support from experts and peers to strengthen and stretch their ideas. Cities are paired with innovation coaches, given access to global innovation experts and practitioners, and exposed to innovation methods to improve their ideas. The collaborative process is designed to make each city's idea stronger, better and ready for implementation. Finalists compete to win millions of dollars to bring their bold idea to life and join a global innovation network for ongoing inspiration and support.

In 2013, five cities in the United States became winners, with Providence, Rhode Island securing the grand prize. In 2014, five cities in Europe became winners, with Barcelona, Spain securing the grand prize. This year, five cities from Latin America and the Caribbean will join their ranks.

This report provides an update on the implementation of each winning idea – and draws important lessons that may be useful to city practitioners elsewhere looking to bring bold ideas to life.

• IF YOU ONLY DO ONE THING •

We asked the winning cities what one piece of advice they'd give city governments setting out to implement a big idea.

Here's what they told us...

ATHENS
GREECE

“Open your doors. Regular drop-ins and meet-and-greets build bridges and grow trust. They create opportunities for people to come together informally to share their ideas and experiences.”

BARCELONA
SPAIN

“Build a broad base of support that crosses party lines right up front. Don't wait until things go wrong or big changes happen. Politics can be disruptive, but the more support you have, the more protected your idea will be.”

CHICAGO
ILLINOIS, USA

“Invest in full-time project leadership to maintain the pace of implementation. Your idea is too important to fit around other competing responsibilities.”

HOUSTON
TEXAS, USA

“Get absolute clarity. In large-scale, multi-year projects, it is essential to get clarity not only on the ultimate project vision, but also on the path for arriving at that vision. This will enable the project leadership to move confidently through decision-making processes and avoid delays.”

KIRKLEES
UK

“Tell people about your idea from the very beginning. A longer term communications strategy is vital but while you get there, keep people's curiosity and interest alive with news and updates, even when it feels to you like not much is happening.”

PHILADELPHIA
PENNSYLVANIA,
USA

“Find a senior leader who is willing to stick their neck out for your idea and make others fall in line. You need support and cover to get things done, especially when things don't go entirely to plan.”

PROVIDENCE
RHODE
ISLAND, USA

“Support your team and make them feel they are part of something special. From making materials look great and providing good quality equipment to celebrating accomplishments of the team and individuals, let them know how much you value their contribution.”

SANTA MONICA
CALIFORNIA,
USA

“Make it easy to do things differently. Telling people to introduce big changes into their way of working will often fail, whereas an offer of resources and support that help people do their work better is harder to refuse.”

STOCKHOLM
SWEDEN

“Let others see how passionately you believe in your idea. Speak with conviction and knowledge and it will draw others to you and open up new opportunities.”

WARSAW
POLAND

“Engage citizens and users in the design of your project early. This will help to avoid costly and time consuming redesigns by ensuring that early iterations reflect the real needs and preferences of your target population. It will also help grow the long-term demand for your product.”

THE PROJECT IN NUMBERS

Athens has a population of **666,046**

Only **13 percent** of Greek citizens say they trust public institutions

0.1%

Volunteering contributes to **less than 0.1 percent** of Greece's GDP

synAthena has already identified and featured **more than 2,000** activities from community groups

CONNECTING CITIZENS TO IMPROVE AND UPDATE THE CITY

ATHENS SYNATHINA

THE BIG IDEA

synAthena connects citizens who have good ideas to the people and organizations that can make them a reality. It harnesses the creative thinking of citizens, and the momentum of their ideas, to change city government for the better.

WHO TO CONTACT

AMALIA ZEPOU

Vice Mayor for Civil Society and founder of synAthena

a.zepou@athens.gr

WHY IS THIS IMPORTANT?

Austerity measures and Greece's economic crisis significantly reduced the operational capacity of Athens' city government. At the same time, citizens began uniting and working together to improve their neighborhoods. These community activities sprang up quickly across Athens, but were disconnected from each other and from potential supporters. There was also no way for the city government to engage with these activities, which carried on alongside its own social services. synAthena taps into the potential of this newly active civil society and capitalizes on the ideas and energy in communities to drive change in City Hall.

HOW DOES IT WORK?

At the heart of synAthena is a website that engages members of the community in problem-solving and reform. Individual citizens and groups can submit activities, as well as ideas on how to improve their city. Citizens who submit ideas are then connected to the relevant government representatives, non-governmental organizations, and private businesses that can help make their ideas a reality. If outdated regulations are needlessly prohibiting the advancement of good ideas, or if it is an idea that has the potential to scale throughout the City, the synAthena project team works with partners in City Hall to reform outdated practices and spread good ideas.

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

2014

SYNATHINA LAUNCHES

After winning the Challenge, the synAthina website launched to map community activities. It also created a co-working space for community groups to perform their activities for free.

2015

UP AND RUNNING!

By early 2015, the concept was fully up and running. Following an outreach campaign to community groups, the website was flooded with more than 600 new activities.

2015

PRIORITIZED IDEAS

The synAthina team began connecting community groups to the relevant governmental representatives, non-governmental organizations, and private businesses to help implement their ideas.

2015

DEMONSTRATED IMPACT

synAthina gained popularity through an event discussing the future of Kypseli Market, a neglected building in central Athens. synAthina led an open forum for community members to design creative uses for the building. The event resulted in a business plan for the building that was then used to solicit bids to operate and maintain the building.

2016

ADDRESSED MAYOR'S KEY PRIORITIES

synAthina partnered with Athens' Vice Mayor of Cleaning to launch an anti-graffiti campaign supported by banks, businesses and civic groups. The City provided the cleaning supplies and volunteers committed to cleaning and maintaining the streets where they live and work. Unlike previous efforts, the streets have remained free of graffiti — in the past, buildings were retagged within days, if not hours, and the City could not keep up.

2016

AUTOMATED CONNECTIONS

synAthina's new website launched with even more activities to connect with — more than 2,000 community projects were active on the site at relaunch. The new website makes it even easier for projects to connect with each other, with private sponsors, and with city officials.

MOVING FORWARD

synAthina has demonstrated its value for citizens and government alike. Armed with a new website that makes it easier to connect groups to one another and to the municipality, synAthina will deepen and expand its impact, including running open calls for ideas on the Mayor's key issue areas.

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team was surprised to learn just how important culture change is and how difficult it is to achieve. At the start, the team had thought they would be able to easily identify and remove government rules and regulations that were getting in the way of community activity. This has proven to be true in some cases, but in many others the barriers have been less to do with prohibitive rules and regulations and more with the culture and practices of the municipality and its employees.

To address this, synAthina brought city officials and community groups together at open forums, which fostered trust and created more collaboration. Colleagues in the municipality, who were needed to execute on community projects, felt more connected to synAthina and better understood how working with community groups could help them achieve their departmental goals. For community groups, they now had an outlet to share their aspirations and frustrations.

The impact on community engagement was striking – in the first three months alone, 69 community groups attended an open forum. synAthina also gained the buy-in of city colleagues, who then partnered with community groups to launch two key demonstration projects – Kypseli Market and the Anti-Graffiti Campaign.

THE PROJECT IN NUMBERS

1.6 million

mjuans@bcn.cat

FIGHTING ELDERLY LONELINESS

BARCELONA VINCLES

THE BIG IDEA

Vincles is an on and offline service that fights loneliness in old age by building social and support networks.

WHY IS THIS IMPORTANT?

18 percent of older people only talk to friends and family once a week and the loneliness they experience can spiral into depression and poor physical health. The world's aging population leaves society facing a loneliness epidemic that is straining health and social care services.

HOW DOES IT WORK?

Vincles provides an older person with a tablet computer loaded with the Vincles app. The app has two elements. The first connects the individual with friends, family, neighbors and care givers, and provides a platform for the network members to coordinate the care of the elderly person.

The second element is a social network that puts older people in touch with each other. Vincles suggests activities for older people who might prefer meeting in person, over a coffee or a game, or chatting online.

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

2014

ISSUED OPEN CHALLENGE

The City of Barcelona ran an open challenge to identify new solutions to elderly isolation, a growing problem in the City. The idea was developed over time into the concept that would win the Mayors Challenge.

2015

DEVELOPED PROTOTYPE

After winning the Mayors Challenge, Vincles developed the first prototype of the app with design input from elderly end-users. From there, it launched a successful pilot with 20 users.

2015

ALIGNED WITH NEW MAYOR

In May of 2015, Barcelona elected a new mayor, Ada Colau. As with any transition, there was a pause while the team aligned itself with the new administration's goals. Through meeting regularly with the new administration leadership, the team was able to understand and adapt to the priorities of the new administration. Specifically, Mayor Colau wanted to see Vincles facilitating more in-person interactions between older people as peers and greater participation in civic life, in addition to more strongly connecting people to their existing friends and families.

2015

REFINED APP AND USER JOURNEY

Using the feedback from the first pilot, the team worked with human-centered design firms to refine the layout of the app and make it more user-friendly. The team also worked with designers to map and specify the user journey from enrollment, to training, to ongoing support. A local university was also brought in to develop a plan to evaluate the program's impact on loneliness and a second university advised the team on the user criteria for inclusion in the program.

2016

CREATED ROLL-OUT PLAN

The new administration created a management and oversight committee with representatives from the Department of Social Rights, the IT Department and City Council. This oversight committee selected target neighborhoods for the next phase of the work that aligned with the Mayor's priorities.

2016

SOLICITED PARTNERS, UPDATED APP (AGAIN)

The team created the service model and worked closely with their colleagues in the legal and finance departments to prepare a detailed specification for a partner organization to implement the service. The 'service model' refers to how users will be recruited, enrolled, trained, monitored and supported. The team also began working with a local technology provider and elderly end users to build and test the next version of the app.

2016

SELECTED PARTNER

In July, eight companies submitted proposals to implement the Vincles service. The proposals were evaluated based on quality and cost and a partner was selected.

MOVING FORWARD

The City will expand Vincles to two districts by the end of 2016 and move toward city-wide coverage in 2017. The team will evaluate and learn quickly from this next phase of work, which will inform its plans to scale across the City. The team will continue to refine the latest version of the app and test different models of delivery in order to reach scale.

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

Procuring an untested idea created a lot of challenge. For example, the team struggled to balance the desire to fully understand the provider market and potential costs against the need to quickly test, iterate and refine. They also had to strike a balance between a contract that would attract a lot of bidders and one that would provide the flexibility to test the model and refine over time. If they had to do it over again, the team would have begun speaking to their procurement colleagues immediately so they better understood their options and the implications for cost and timeline.

DATA-DRIVEN DECISION MAKING AT SCALE

CHICAGO SMARTDATA PLATFORM

THE BIG IDEA

The SmartData Platform is the world's first open-source predictive analytics tool that enables government to use big data to confront a wide range of urban challenges – from rat infestations and foodborne illness to childhood lead poisoning.

WHY IS THIS IMPORTANT?

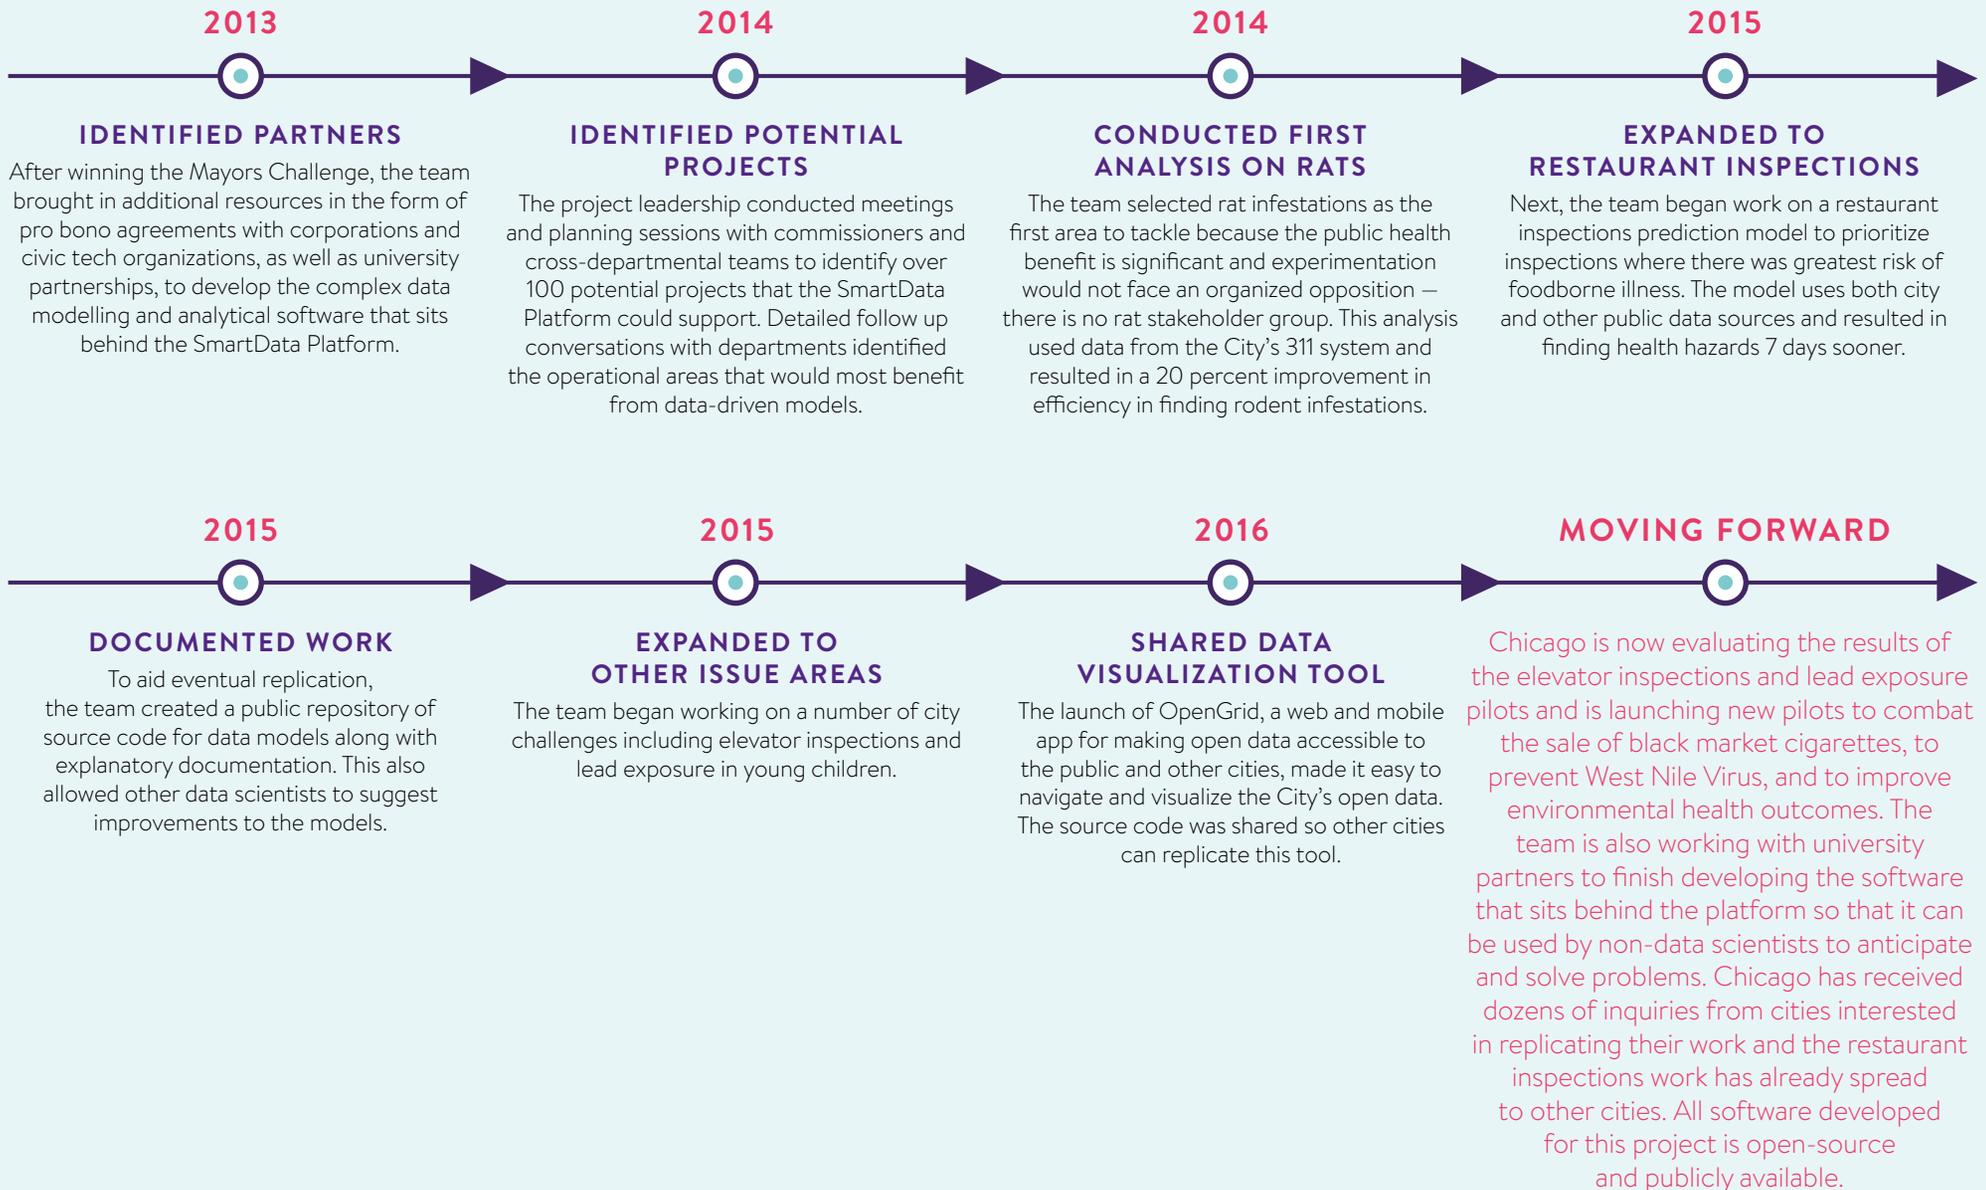

City governments make decisions that impact citizen life every day. How can we protect children from danger? How can we safeguard our citizens' health? How can we keep animal populations under control? As urban populations grow and demand for public services increases, governments need to find new ways to make the best and most efficient decisions. Cities routinely collect millions of units of data – around 7 million units a day in the City of Chicago. But this is rarely used to inform decision-making and until recently was a largely untapped source of intelligence.

HOW DOES IT WORK?

The SmartData Platform team works with city departments to collect and analyze the data at their disposal. The team's data scientists use advanced analytics and machine learning to uncover many new ways of tackling the big issues faced by city governments. Based on this analysis, the team produces a detailed plan of action, which they work with departments to implement. Implementation of data-driven approaches has achieved results – the rodent baiting process is now 20 percent more efficient, and restaurant inspectors now find dangerous violations 7 days sooner than before.

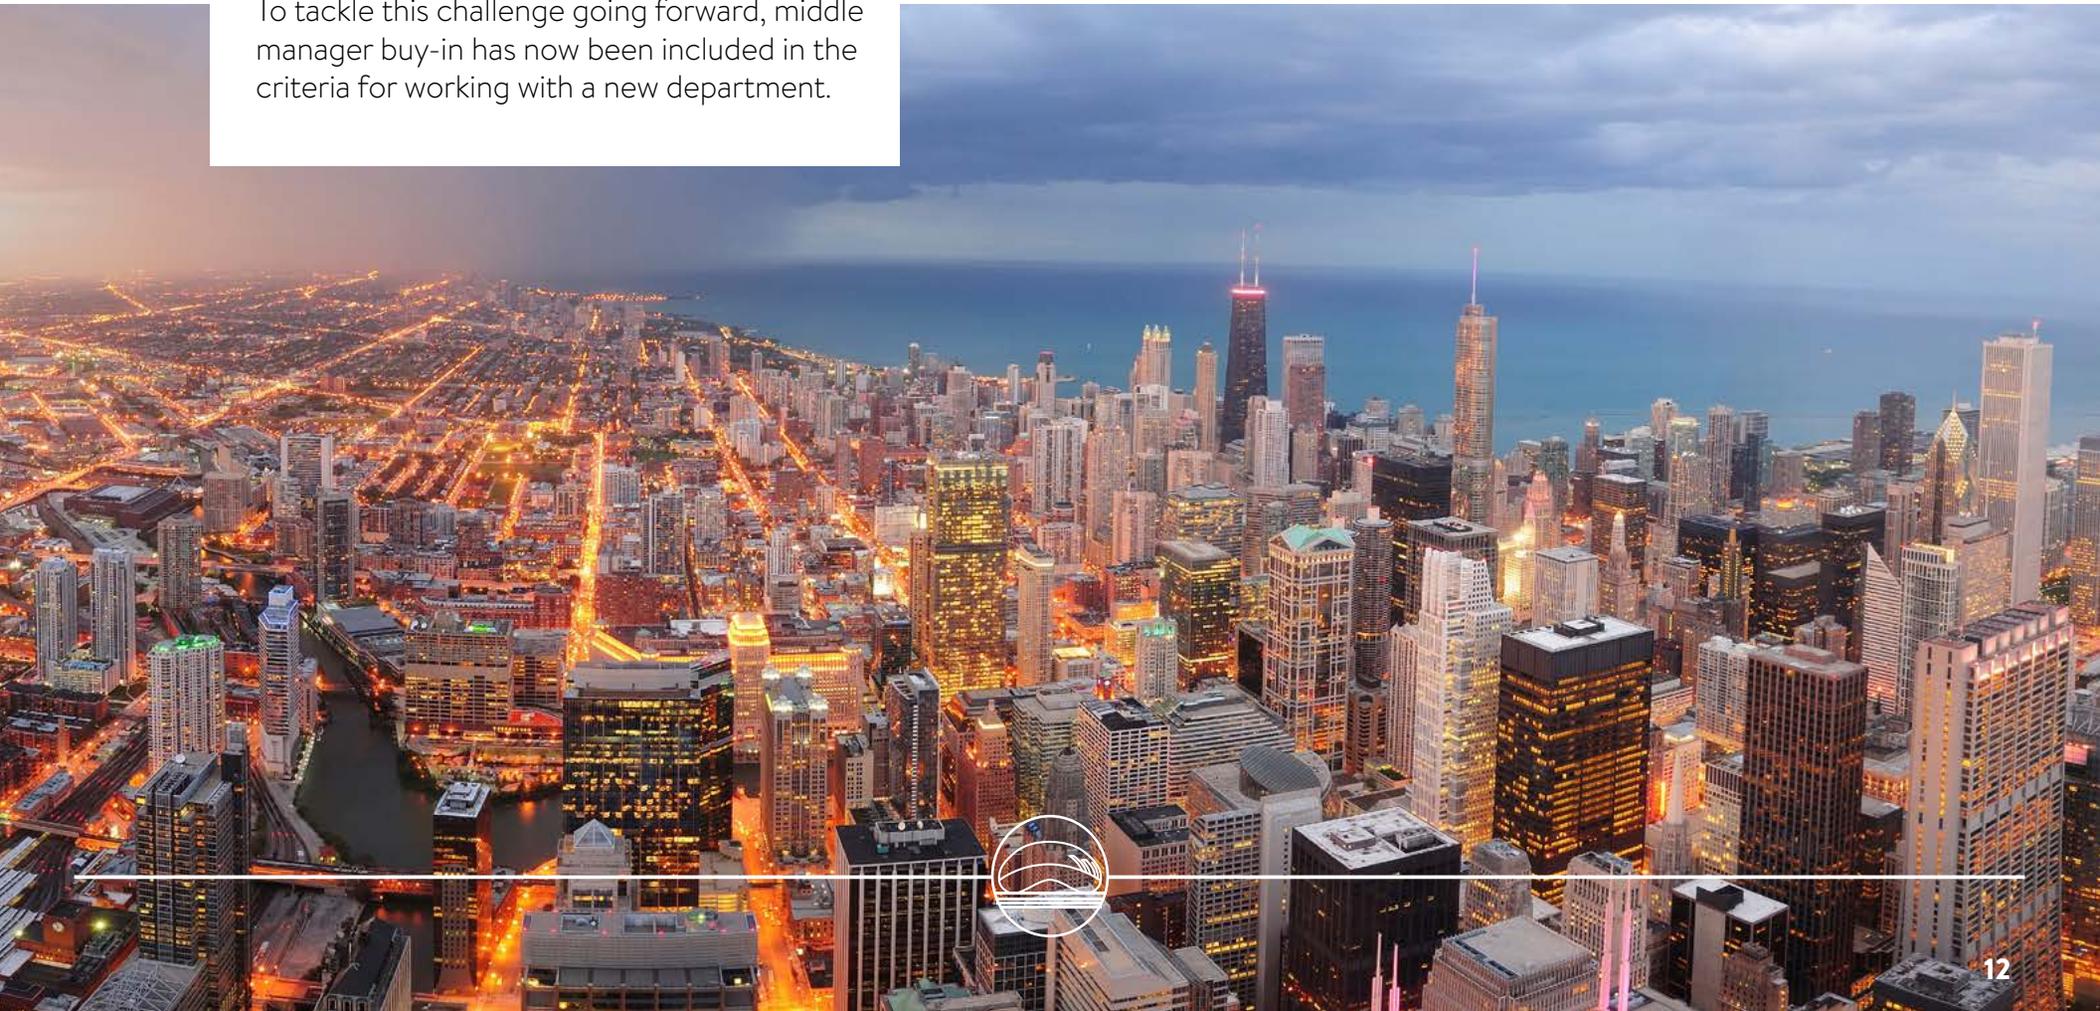

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The biggest surprise and biggest challenge was the importance of middle managers. Without their buy-in, the project wouldn't have moved forward. At first, some departments didn't understand the technology or its purpose. This made them cautious. Other middle managers were resistant because they felt that the platform undermined their decision-making authority. To tackle this challenge going forward, middle manager buy-in has now been included in the criteria for working with a new department.

THE PROJECT IN NUMBERS

Houston has a population of **2,196,000**

It's the 4th largest city in the USA, generating **435,000 tons** of waste annually

The One Bin project aimed to increase the City's recycling rate from 16 percent to **75 percent** over three years

The cost of the One Bin recycling plant was projected to be in excess of **\$100 million**

A LEAPFROG APPROACH TO RECYCLING

HOUSTON ONE BIN FOR ALL

THE BIG IDEA

One Bin planned to dramatically increase recycling by relying on technology, rather than people, to do the sorting.

WHY IS THIS IMPORTANT?

Across the United States, recycling rates have become stagnant and greater numbers of cities are finding single stream recycling unaffordable. The U.S. national average for recycling is 35 percent; Houston only recycles 16 percent of household waste.

HOW DOES IT WORK?

With One Bin, all residential trash and recycling would have been placed into one bin, which would have been processed automatically with cutting edge technologies to sort trash, separating out the products that could be monetized. The cost of the plant was to be funded through a public-private partnership where the provider would construct and operate the plant, financed with a processing fee, the commodity value of some of the materials, and the future cash value of consumer products manufactured onsite from waste materials. The City of Houston wouldn't have had any capital outlay and no equity position in the enterprise.

WHO TO CONTACT

CHRIS BUTLER

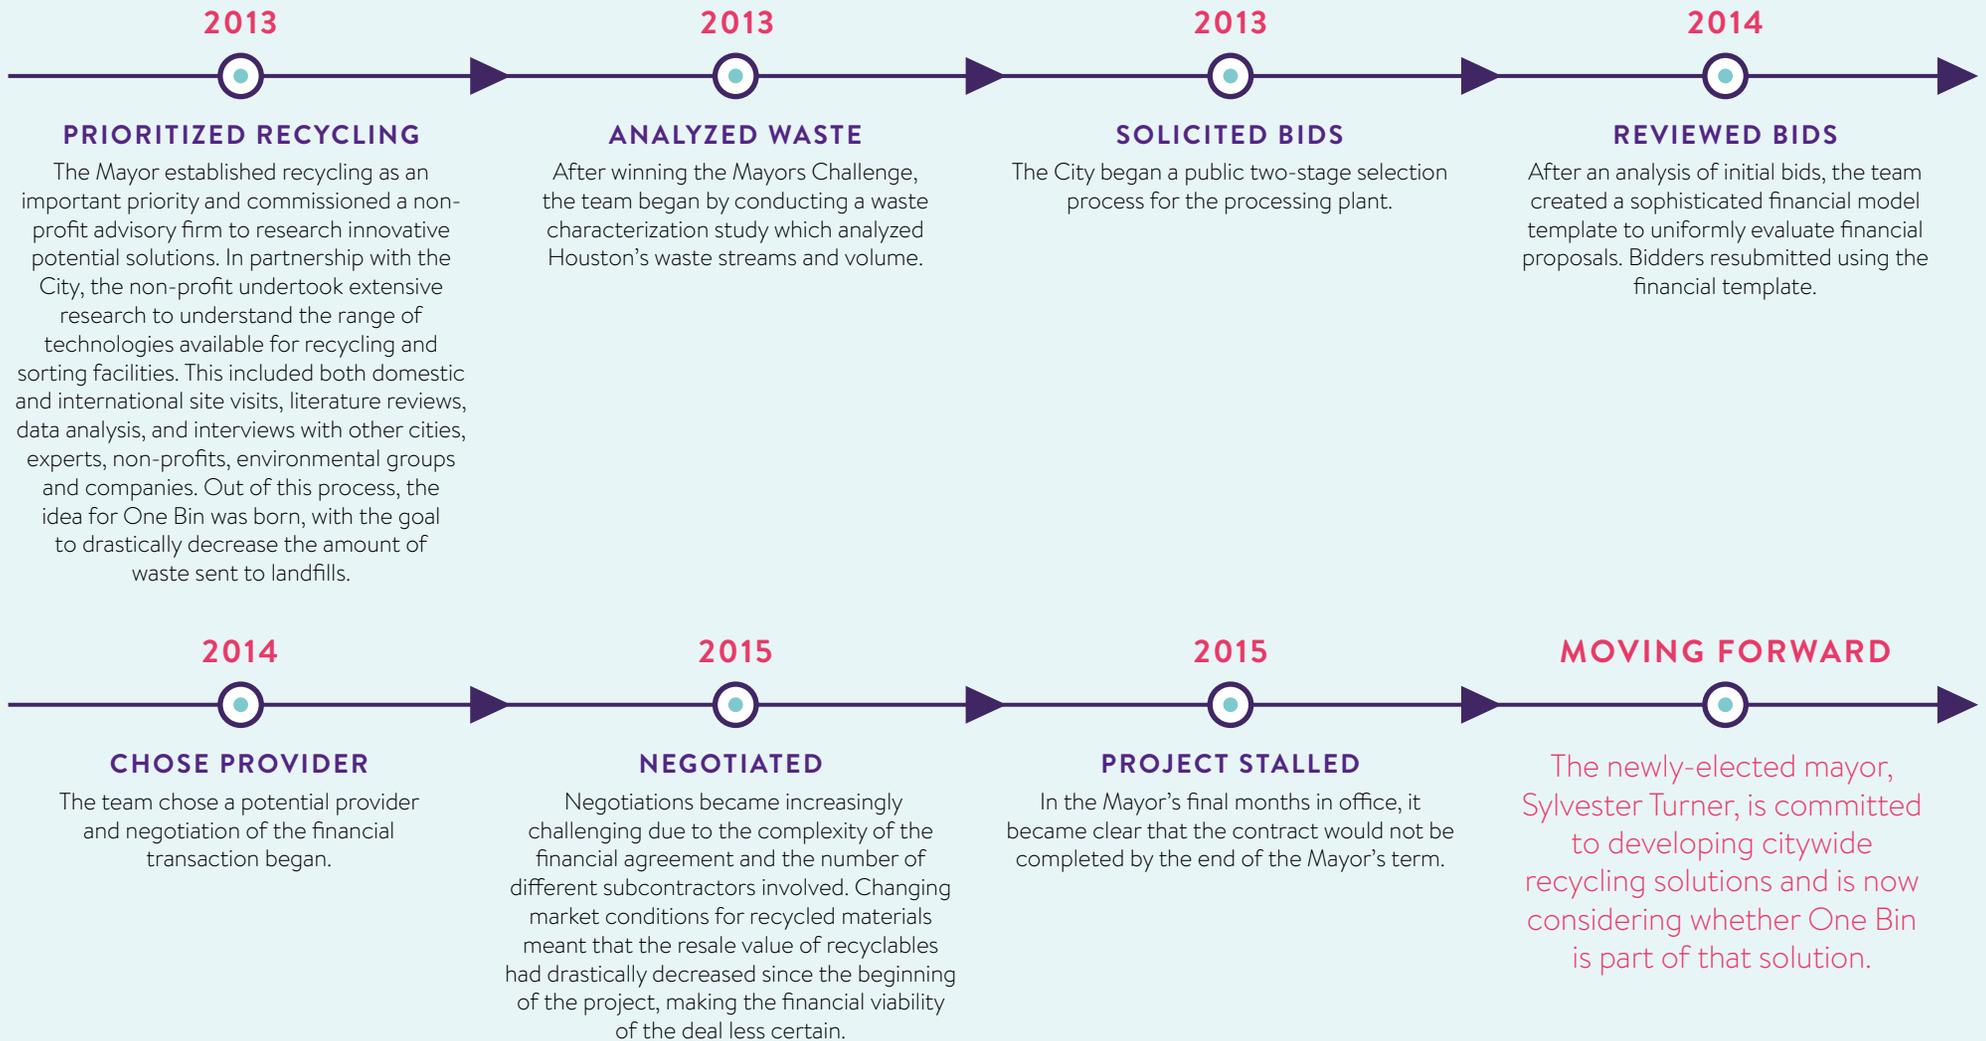

Deputy Director, Chief
Development Office

Christon.Butler@houstontx.gov

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The One Bin idea was the most complex idea ever to win the Mayors Challenge, due to the multivariate business model, long time frame for project implementation and impact, and vocal special interests. Given this reality, team members reflected that the project would have benefited from a shared definition of success – one that might have helped them navigate some of the challenges they encountered.

THE PROJECT IN NUMBERS

431,020 people
live in Kirklees

In the UK, the average car sits unused for **23 hours a day** and a power drill is used for an estimated **12 to 13 minutes** over its entire lifetime

The UK sharing economy is worth **\$0.5 billion** (2014). The global sharing economy is worth **\$15 billion** (2014), but is expected to reach **\$335 billion** by 2025, worth **\$15 billion** (£9 billion) in revenues to the UK alone

WHO TO CONTACT

DUGGS CARRE

Comoodle
Program Lead

duggs.carre@kirklees.gov.uk

TRANSFORMING COMMUNITIES THROUGH THE POWER OF SHARING

KIRKLEES COUNCIL COMOODLE

THE BIG IDEA

Comoodle helps communities do more by sharing municipal and community assets: stuff, space and skills.

WHY IS THIS IMPORTANT?

Financial pressures have squeezed both community groups and government departments, and many can no longer afford to be as active as they want to be. Sharing underused stuff, space and skills helps everyone do more with less.

HOW DOES IT WORK?

The resources owned by municipal governments are often underused and could be put to much better use in support of community action. Comoodle is a digital platform that makes sharing municipal, community and private assets ("stuff, space and skills") simple, whether it's a vehicle, an activity space, or someone with skills to share. The Comoodle team acts as the facilitator of these trades, handling any red tape relating to insurance or safety regulations. After use for an agreed period, the community group returns the resource to the lender to be shared again.

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

2014

CONCEPT DEVELOPED

Constricting budgets led the Council to conduct a strategic planning process to identify new ways to do more with less. The political leadership saw the sharing economy as an opportunity and one way to deliver that change. The concept was developed and refined through the Mayors Challenge.

2015

CONVENED STAKEHOLDERS

After winning the Mayors Challenge, the team began engaging with internal and external stakeholders to build a community of support around Comoodle. The team organized a full day visioning session with a wide range of stakeholders, who gathered to think about the stuff, space and skills they might offer up to others.

2015

LAUNCHED EARLY PROTOTYPES

The team launched early prototypes that delivered positive results. In particular, the team had success in lending vans from the Council's fleet of vehicles. Others proved more difficult to get off the ground. The prototypes were evaluated by the University of Huddersfield to inform further rollout.

2015

CONDUCTED OUTREACH

The team conducted a user survey and learned that they needed to get more information about the project out. The team developed a communications campaign to grow interest and identify new opportunities to test the concept.

2016

LAUNCHED MORE PROTOTYPES

The team ran a second round of more targeted prototypes focused on lending sports equipment, different forms of transport and storage. They showed greatest success when there were a combination of factors: a good inventory of assets that can be requested; a strong understanding of Comoodle as an exchange mechanism; and existing community activity that can be bolstered by Comoodle.

MOVING FORWARD

A new website informed by demand and prototypes will be launched in the Fall of 2016. In the meantime, Comoodle trades are continuing to increase and the team is constantly evaluating trades to understand how to best facilitate the exchanges, and to assess the value for all participants.

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

Much like Chicago, Kirklees found that while it is important to have the support of senior leaders, the buy-in of middle managers and frontline staff is just as important to the success of an innovation. They also recognized that their success oftentimes relied on the discretionary effort of their colleagues above and beyond their day jobs. In Kirklees, middle managers have freed up the resources and permissions necessary to share Council assets and frontline staff have developed practical processes and overcome barriers to trading. Their time, energy and commitment have been critical to the successful delivery of prototypes.

At the same time, these are very busy people with competing priorities and multiple requests for their time. It's vital to be clear on both the value proposition and the request. What's being asked of them and how will this make a difference to the Council and to their work?

THE PROJECT IN NUMBERS

Philadelphia's population is **1.5 million** people

137 applications to the FastFWD program were received from around the world

Nine pilot projects were contracted; two have already been taken to scale

USING PROBLEM-BASED PROCUREMENT TO GENERATE NEW SOLUTIONS

PHILADELPHIA FASTFWD

THE BIG IDEA

FastFWD turned Philadelphia's problems into the next creative business opportunity for entrepreneurs from around the world - all while improving the City's process for pilot procurement.

WHO TO CONTACT

ANDREW BUSS

Director of Innovation Management, Office of Innovation & Technology

andrew.buss@phila.gov

WHY IS THIS IMPORTANT?

Despite the challenges faced by government agencies, innovative solutions are hard to secure because procurement processes are slow, complex, and prescriptive. As a consequence, bright social innovators take their ideas to the private sector instead, the same handful of companies rehash old solutions in response to bids, and government lags behind in adopting new ideas.

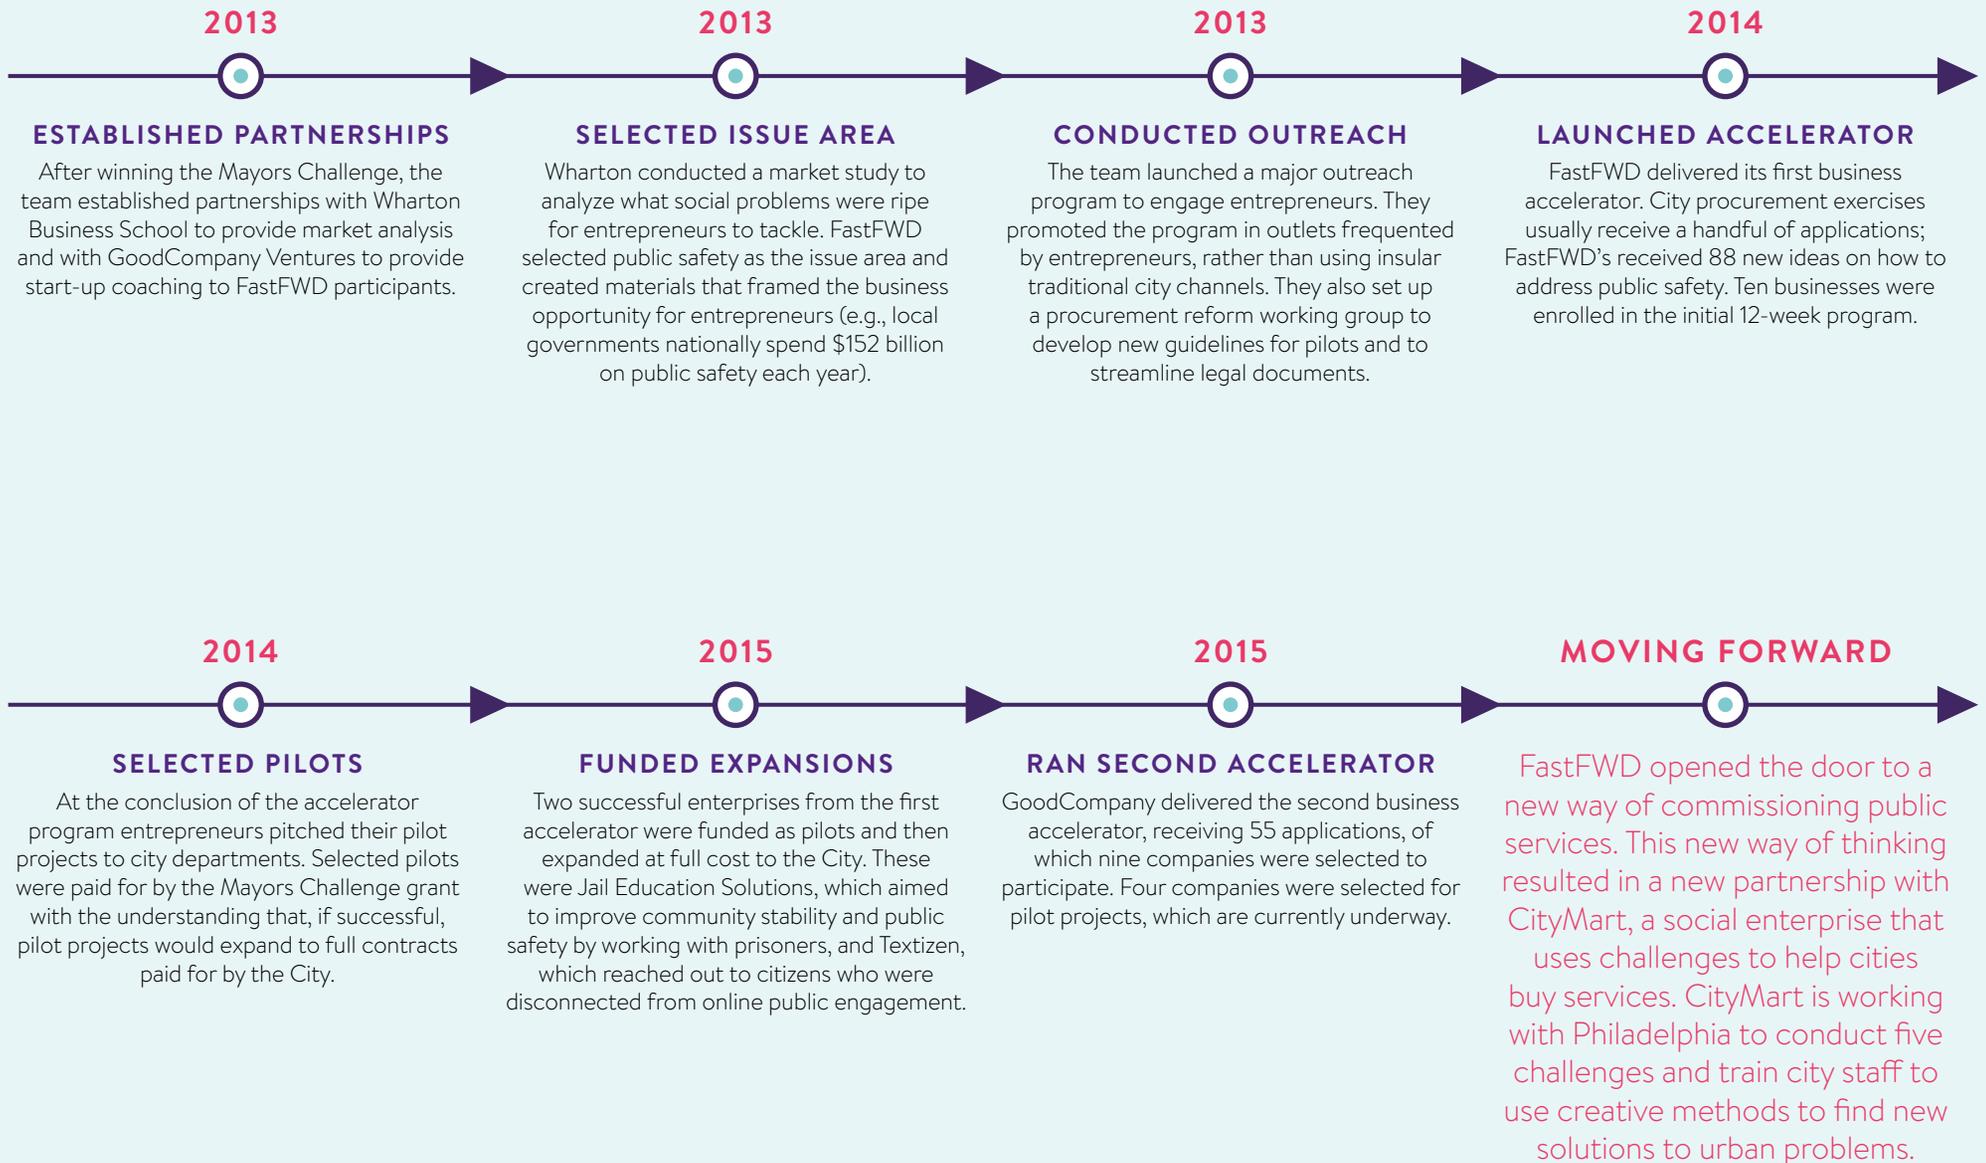

HOW DOES IT WORK?

Philadelphia chose problems it needed to tackle, and FastFWD found the right social entrepreneurs to solve it. FastFWD opened up the City's challenges to proposals far beyond the usual vendors. Chosen entrepreneurs were connected to city staff and specialist coaches, who helped them develop their ideas into sustainable solutions.

FastFWD's role was to act as a business accelerator, getting great ideas up and running. It also created a streamlined pilot procurement process, and made it available to other departments interested in pilot projects.

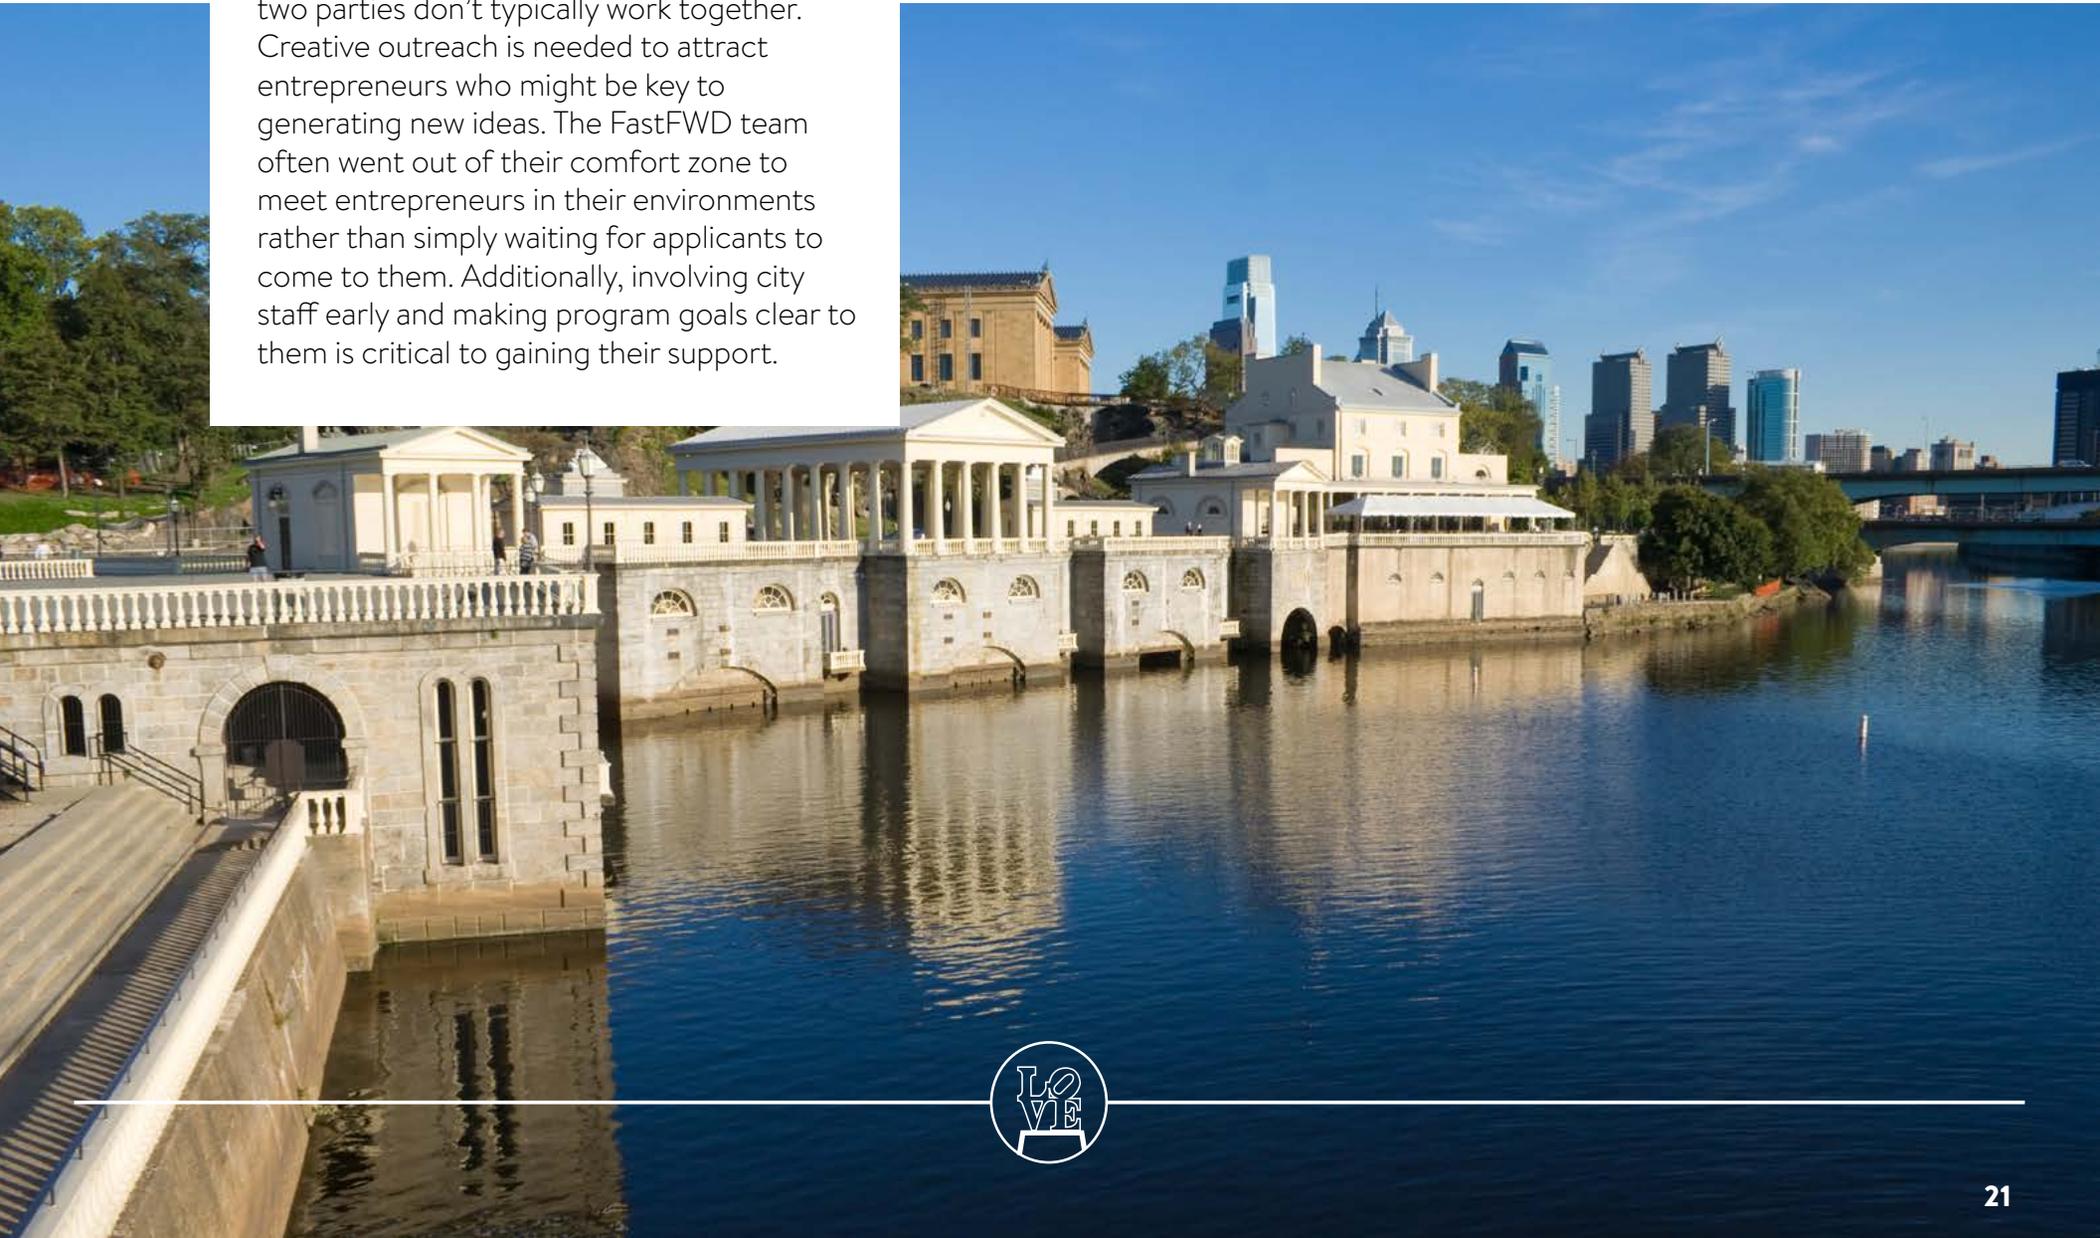

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team learned that intentionally connecting entrepreneurs and city government is challenging because the two parties don't typically work together. Creative outreach is needed to attract entrepreneurs who might be key to generating new ideas. The FastFWD team often went out of their comfort zone to meet entrepreneurs in their environments rather than simply waiting for applicants to come to them. Additionally, involving city staff early and making program goals clear to them is critical to gaining their support.

THE PROJECT IN NUMBERS

Providence has
a population of
177,994

Lower income children
hear **30 million**
fewer words by their
fourth birthday than
higher income peers,
resulting in a language
development gap

For healthy
development,
children need
to be exposed
to about **15,000**
words a day

50 percent of children
enter the Providence
Talks program hearing
less than half the words
needed for healthy
brain development

CLOSING THE ACHIEVEMENT GAP, FAMILY BY FAMILY

PROVIDENCE PROVIDENCE TALKS

THE BIG IDEA

Providence Talks is an early childhood program that puts parents at the heart of their child's cognitive development. It helps disadvantaged children close the achievement gap by increasing parent-child interactions at a critical age.

WHY IS THIS IMPORTANT?

By the time they are four, children in low-income households have heard 30 million fewer words than their wealthier peers. Research shows that this has a negative impact on long-term educational attainment, health outcomes, economic prospects and future family stability.

HOW DOES IT WORK?

A family is given a "word pedometer," a piece of technology that counts the number of words and conversations that children are exposed to in the home. They are also visited twice monthly by a coach who helps parents to understand the importance of words to early childhood brain development and monitor their own progress, while offering tips for improvement.

WHO TO CONTACT

CAITLIN MOLINA

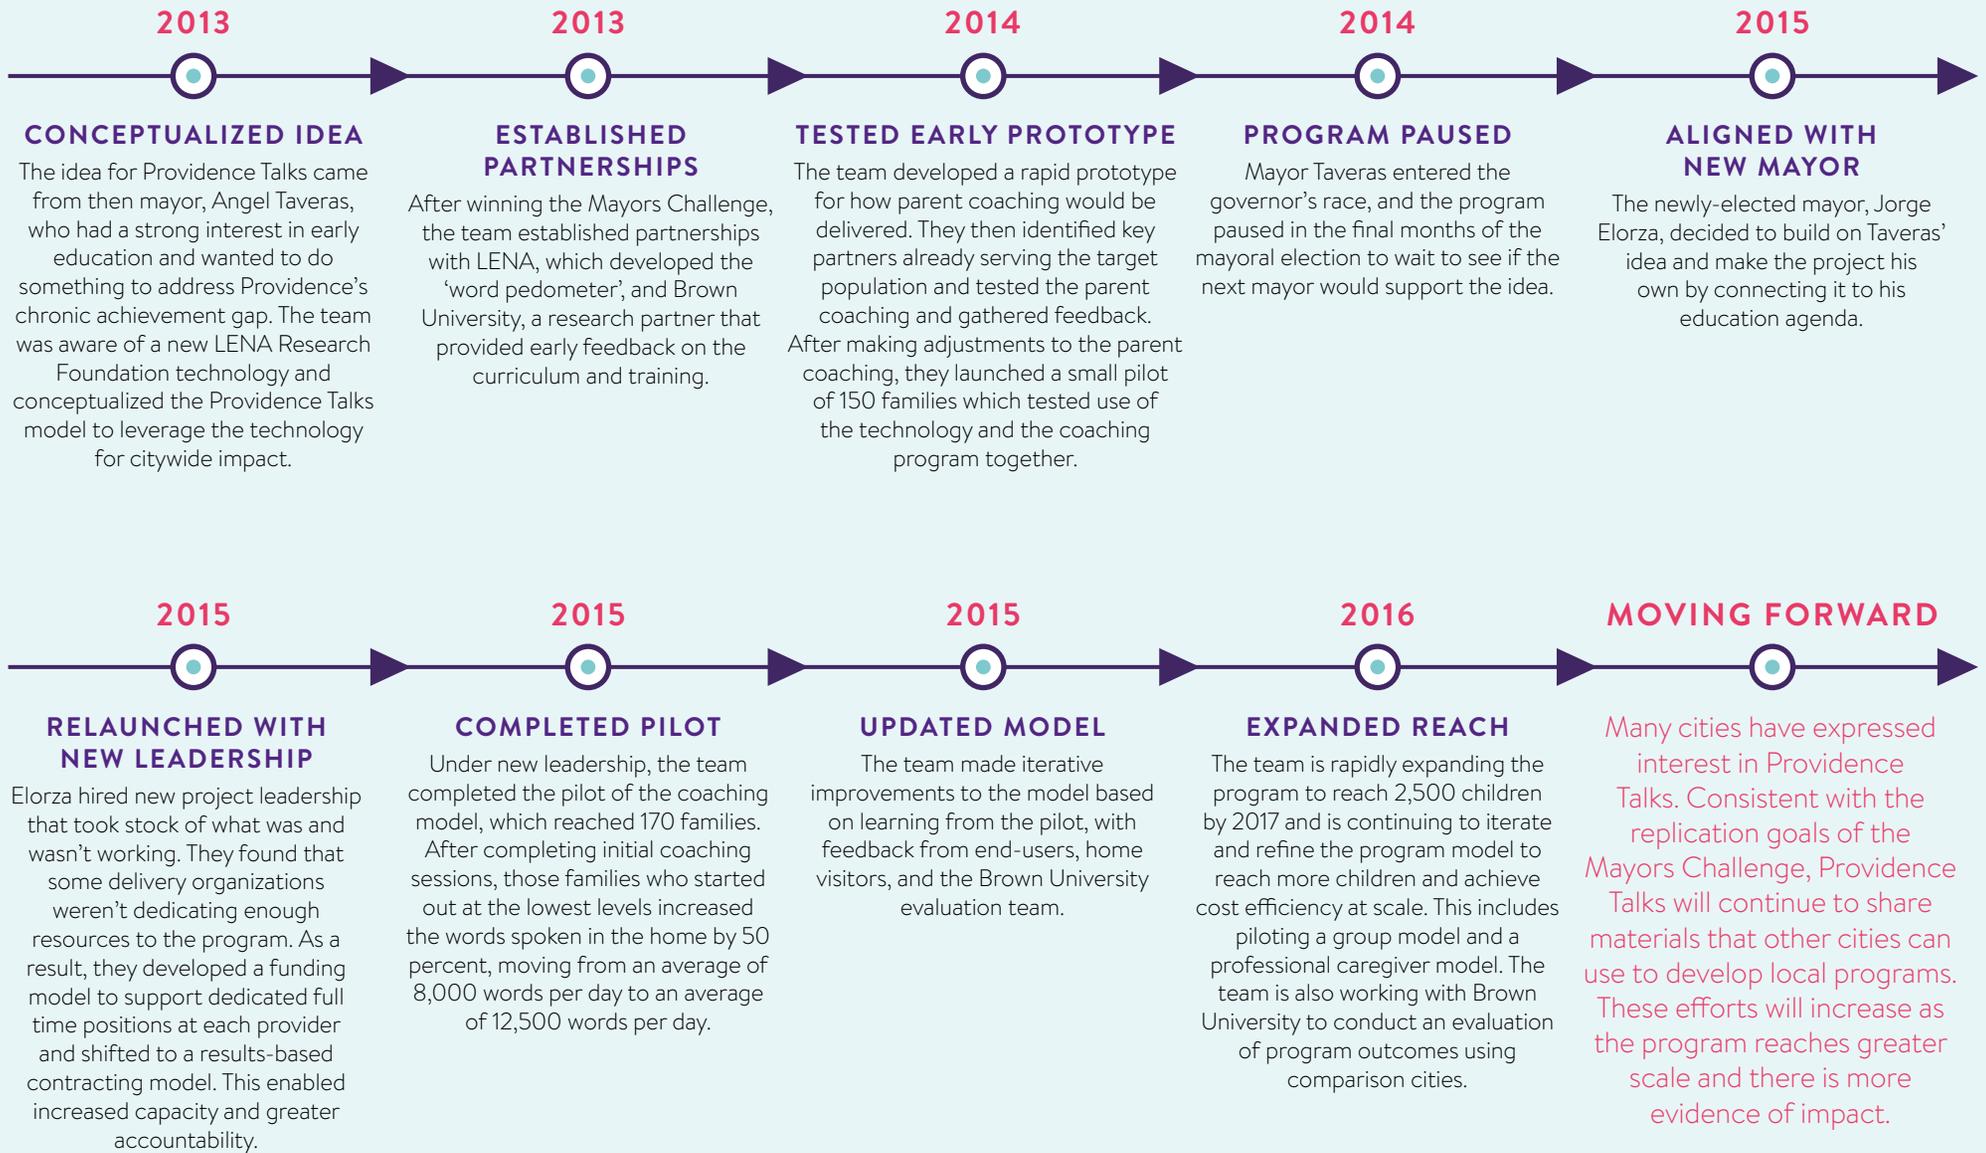

Executive Director
of Providence Talks

Cmolina@providenceri.org

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team came to appreciate the value of prototyping and piloting as opposed to lengthy and arduous planning. At the start, progress was slow because of the team's perfectionism. They didn't want to do anything without it being 100 percent right. The new leadership brought a new philosophy: test, learn, adapt. The leadership shifted the culture to one that sees failure as the best way to learn how to tackle the next challenge. This meant the team were able to explore new ideas quickly and effectively. For example, in developing new service delivery models for community groups and day care centers, the team piloted using a single provider. This allowed them to test a variety of ideas and approaches before making final decisions about how the new program model would be rolled out across the network.

THE PROJECT IN NUMBERS

Santa Monica's population is 92,000

The first Wellbeing Survey was launched in September 2014, in English and Spanish

2,200
responses

2,200 Santa Monica residents responded to the survey over four weeks, nearly four times the number of previous responses to Santa Monica resident surveys

WHO TO CONTACT

JULIE RUSK

Assistant Director,
Community & Cultural
Services, City of Santa Monica

Julie.Rusk@SMGOV.NET

PUTTING WELLBEING DATA AT THE HEART OF GOVERNMENT

SANTA MONICA THE WELLBEING PROJECT

THE BIG IDEA

Cities around the world are increasingly recognizing that true progress takes into account the wellbeing of people, but managing and improving wellbeing first requires accurate measures. Santa Monica has devised a ground-breaking metric that puts wellbeing at the forefront of decision-making.

WHY IS THIS IMPORTANT?

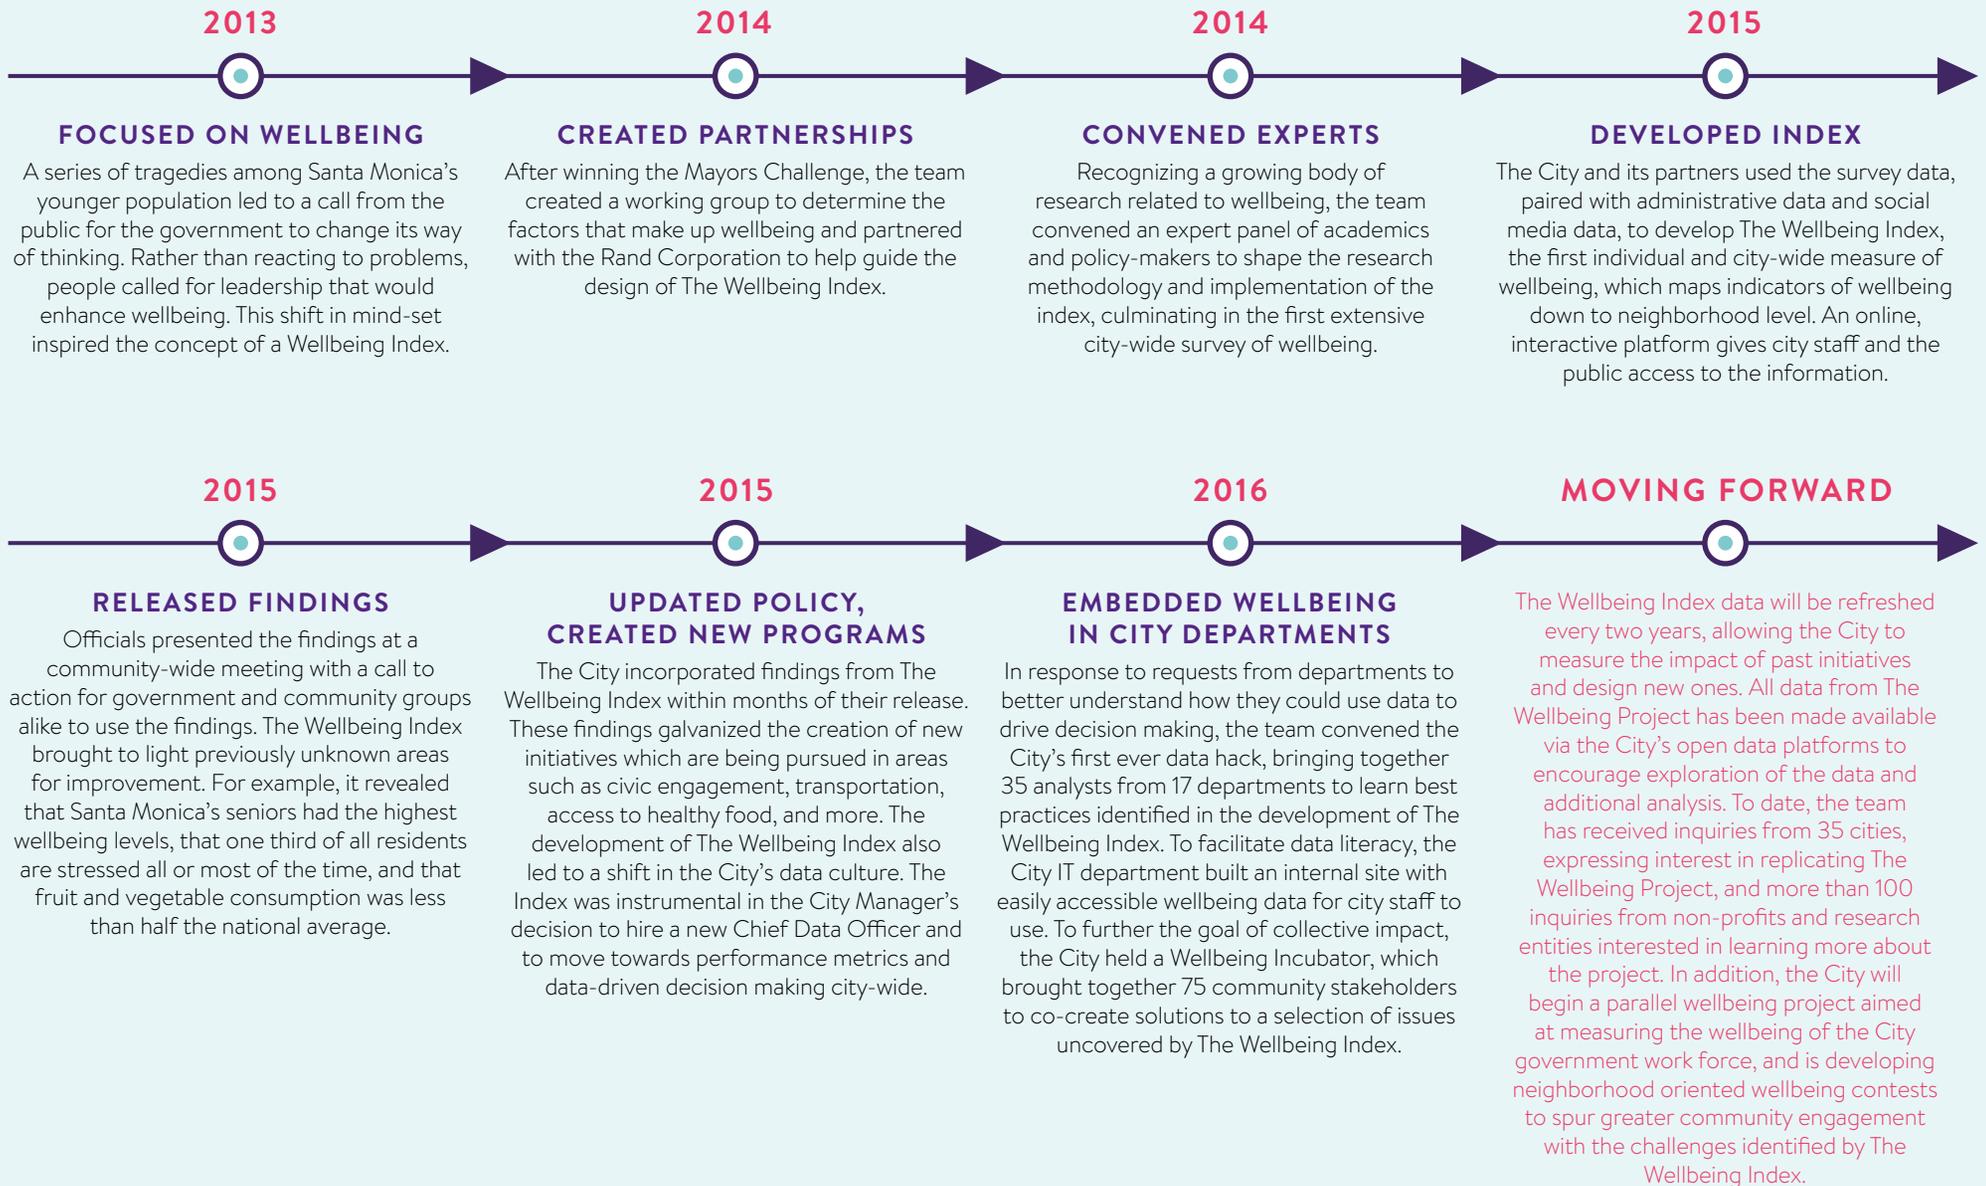

Typical measures of government progress, like GDP, reduce people's lives to numbers that don't reflect their fulfillment, happiness or quality of life. Santa Monica's approach measures government against the things that really matter in the lives of its residents: health, community, place, learning, economic opportunity and overall outlook.

HOW DOES IT WORK?

Santa Monica's Wellbeing Project has four elements – define, measure, act, repeat. The team began by defining the most locally relevant aspects of wellbeing. They then measured community wellbeing with data collected from three sources: a citywide Wellbeing Survey, city-held data sets and social media footprints. Finally, they are acting on the results of their findings to reallocate city resources and identify new programs to address areas with gaps in measured wellbeing. The Index helps decision makers target key problem areas and track the impact of their policies on resident wellbeing.

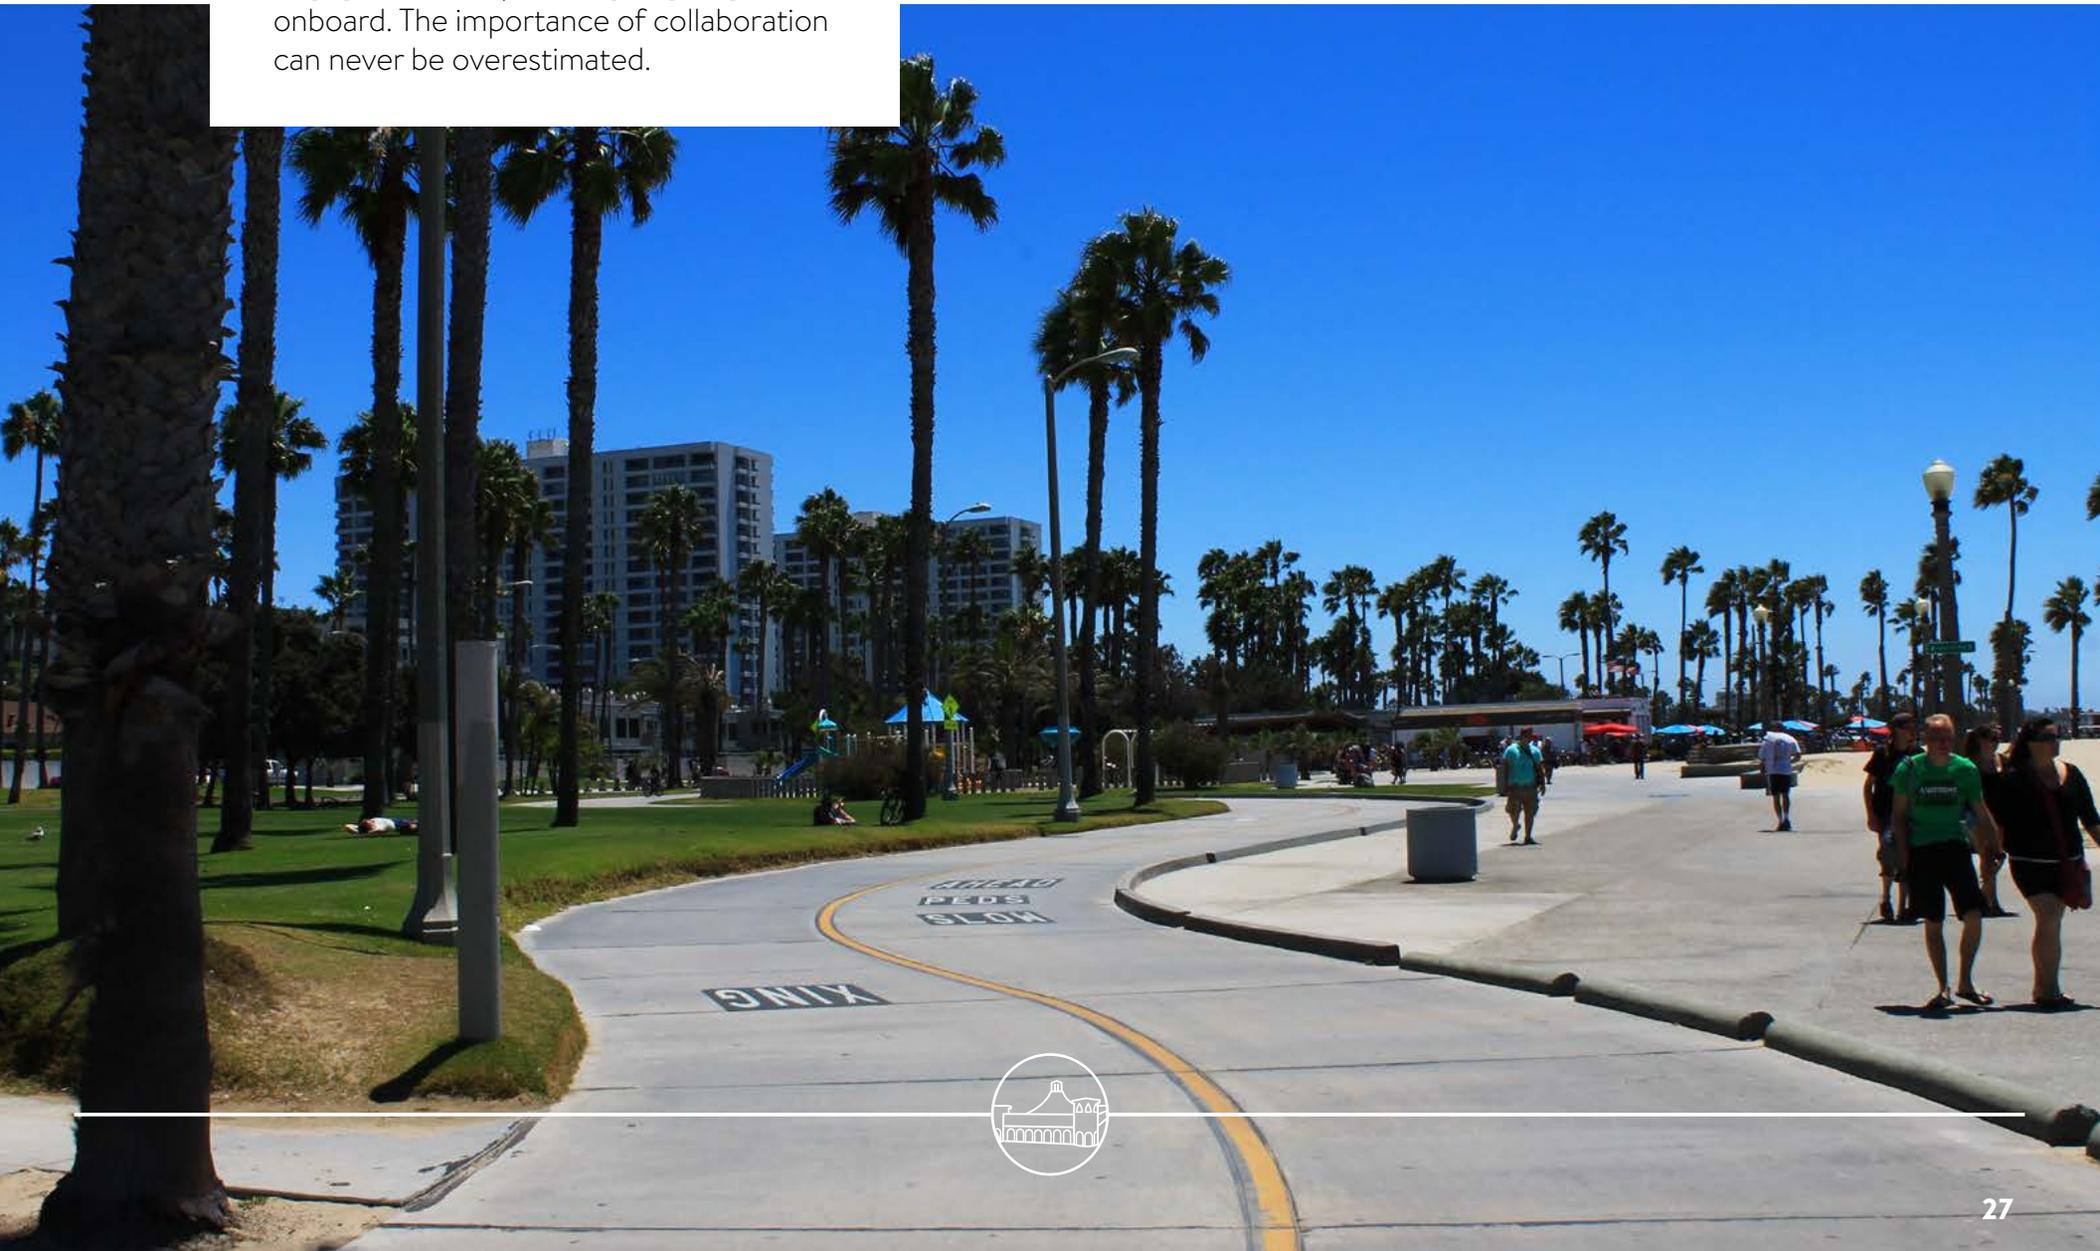

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team learned that you need to have a clear understanding of who you need to engage and how you are going to get them onboard. The importance of collaboration can never be overestimated.

THE PROJECT IN NUMBERS

Stockholm's
population is
900,000

8 out of 10
Stockholm citizens
want to do more to
fight climate change

WHO TO CONTACT

MATTIAS GUSTAFSSON

Project Manager

mattias.gustafsson
@extern.stockholmvatten.se

ENGAGING CITIZENS IN THE FIGHT AGAINST CLIMATE CHANGE

STOCKHOLM STOCKHOLM BIOCHAR PROJECT

THE BIG IDEA

The Stockholm Biochar Project engages citizens in the fight against climate change by converting their garden waste into biochar. Biochar has multiple benefits – the biochar production process traps carbon that would otherwise be released into the atmosphere as carbon dioxide and produces heat that can be used as energy. When used in plant beds and fields, it improves the soil structure, storing nutrients that lead to better plant growth.

WHY IS THIS IMPORTANT?

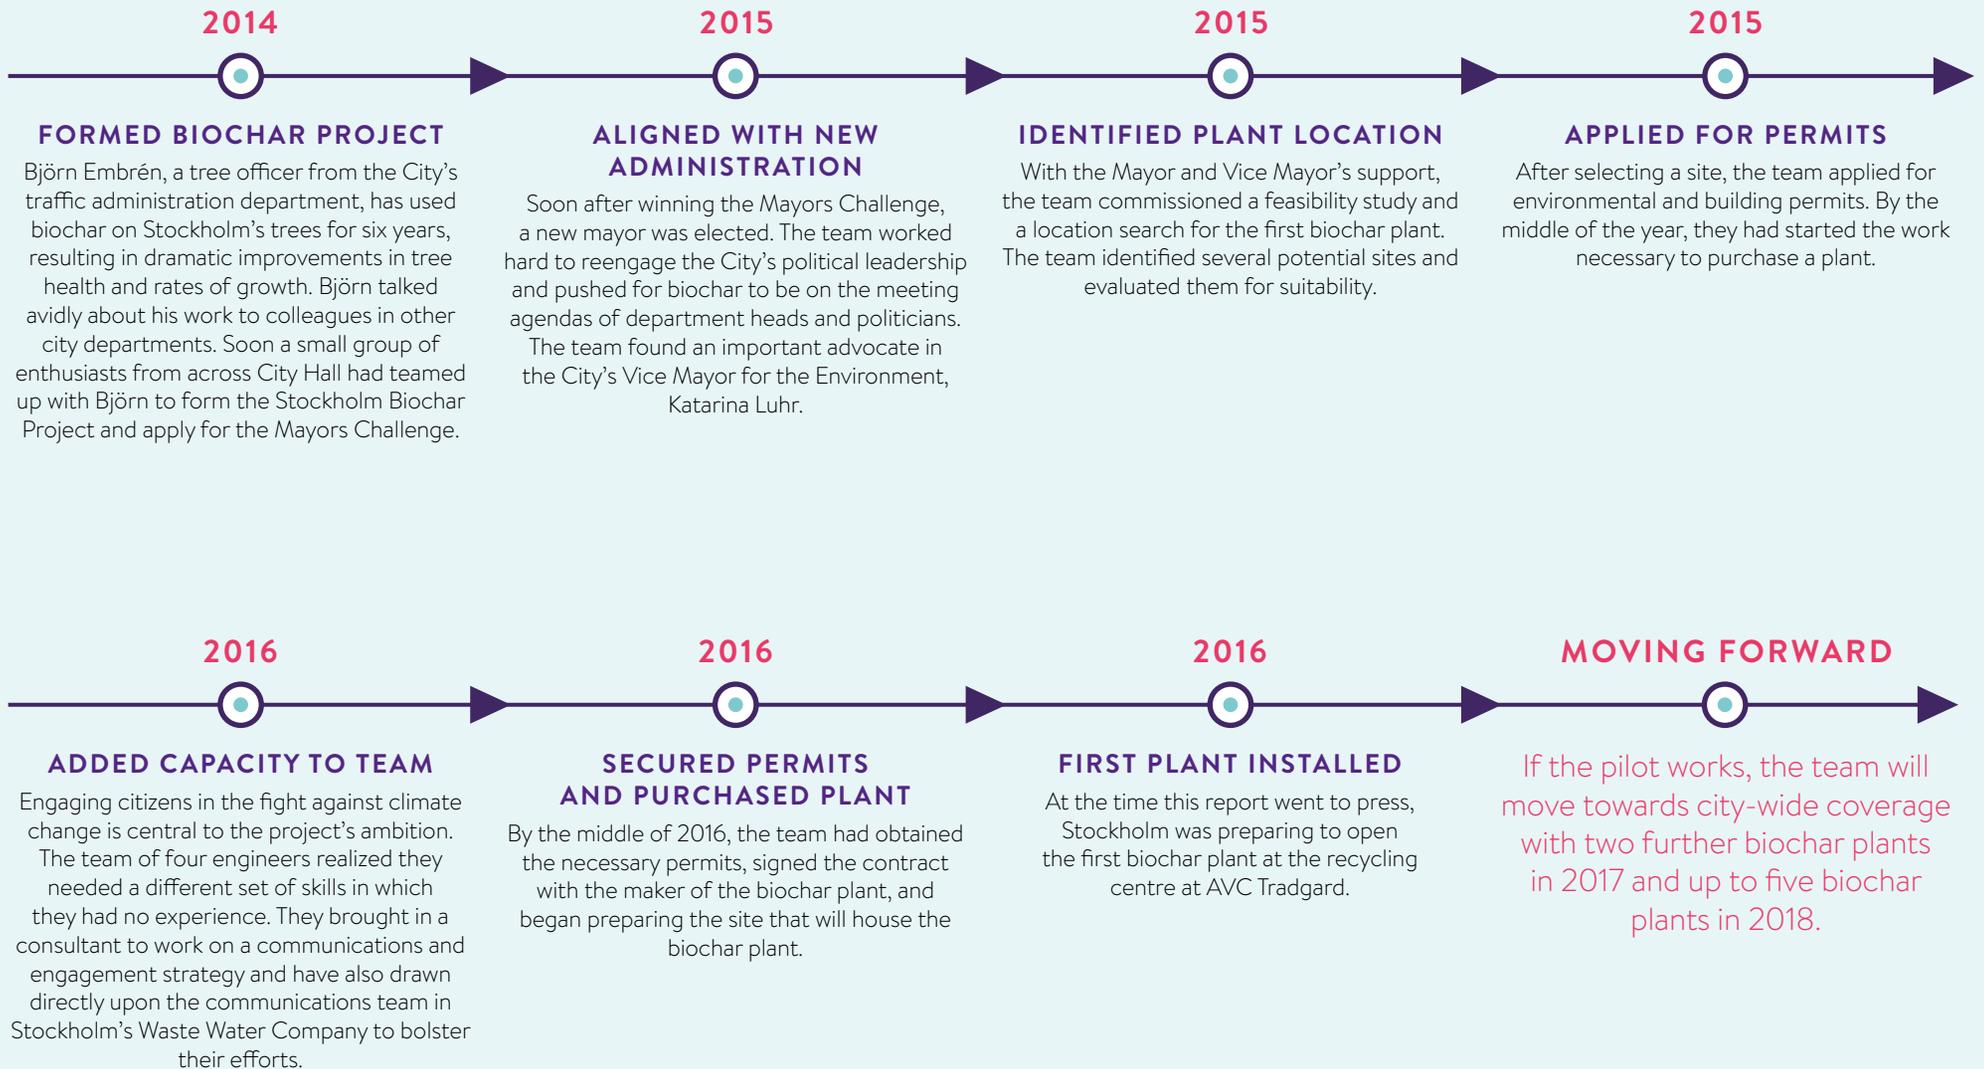

Cities are major contributors to climate change. Although they cover less than 2 percent of the Earth's surface, they produce more than 60 percent of global carbon dioxide emissions. Stockholm aims to become fossil fuel free by 2040, and the biochar project will be the first city initiative to directly involve citizens in meeting this target.

HOW DOES IT WORK?

Stockholm collects plant waste from residents and recycles it into biochar using a newly acquired biochar plant, which is about the size of a shipping container and will be installed at an existing waste management site. This biochar is then returned to citizens for use in gardens and allotments, and distributed to green sites around the City.

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team learned the importance of communicating early and often when attempting to implement something innovative. The success of the biochar project depends on purchasing and installing a piece of technology that is entirely new to the City. Nevertheless, it still had to go through the standard channels of procurement and permitting. Companies that make biochar plants tend to be small startups or university spin-outs and can't necessarily guarantee that their technology will work at specific efficiency levels nor can they provide precedents for how the technology has worked in other cities. The biochar team didn't always have answers for the standard questions, and explaining that these companies were still best for the program despite the unknowns, took time. If they had it to do over again, the team would have done more work at the outset to set the expectations of their colleagues and established an open, ongoing dialogue.

UNLOCKING INDEPENDENCE FOR BLIND AND VISUALLY IMPAIRED PEOPLE

WARSAW VIRTUAL WARSAW

THE BIG IDEA

Virtual Warsaw will make the City more accessible to blind and visually impaired people by installing thousands of beacons that communicate directly with smartphones.

WHY IS THIS IMPORTANT?

Forty thousand of Warsaw's two million residents live with a visual impairment, making it harder for them to navigate freely around the City without significant training (between 60 and 90 hours according to a recent survey) and social support. Very little of the City's core services or cultural infrastructure are currently adapted to meet their needs.

HOW DOES IT WORK?

A blind or visually impaired person downloads the Virtual Warsaw app to their smartphone. The app provides navigation prompts and easy access to key information such as bus times and opening hours, supporting them to move independently around the City.

THE IMPLEMENTATION TIMELINE

HOW IS THE IDEA BEING BROUGHT TO LIFE?

THINGS WE WISH WE HAD KNOWN AT THE BEGINNING...

The team learned that the best way to really understand the needs, frustrations and aspirations of citizens is to work alongside them to develop a solution. Engaging citizens and service users in the design of Virtual Warsaw meant they were able to avoid costly and time consuming redesigns and ensured that later iterations reflected the real needs and preferences of visually impaired people. The team also believe engaging users will help stimulate long-term demand for Virtual Warsaw.

SO WHAT DOES THIS ALL ADD UP TO?

AND WHAT MIGHT IT MEAN FOR OTHER CITIES?

The winners of the Mayors Challenge work in very different contexts and implement a wide range of ideas, yet there are striking similarities in the challenges they have faced and the strategies they've used to overcome them.

To conclude *Bringing Bold Ideas to Life*, we take a look across the cities' experiences to offer five insights for city practitioners everywhere seeking to implement a bold new idea. For each insight we pose some questions for practitioners to consider in applying these insights to their own work.

1. PLAYING POLITICS

The bigger and bolder an idea, the more senior political support is needed.

Unfortunately, such support can also be unpredictable. Mayors and deputies change, priorities shift, and immediate concerns often take precedence.

Keeping abreast of the political agenda and being clear about how your idea contributes to the success of that agenda is essential to securing ongoing support. Building relationships with and winning the confidence of trusted advisors can be helpful too.

QUESTIONS TO CONSIDER

WHAT ARE THE BIG POLITICAL STORIES
IN YOUR CONTEXT AND HOW
DOES YOUR IDEA FIT?

WHO ARE THE PEOPLE YOU NEED TO
CONVINCE OF THE VALUE OF YOUR
IDEA, TO INSURE AGAINST POLITICAL
INSTABILITY?

2. SUPPORT CAN COME FROM ANYWHERE

A bold new idea has the potential to attract interest from unexpected people and places. Design companies and tech start-ups hope to test and showcase their new products at scale.

Businesses hoping to reach new customers want to be part of public events, and new data and insight are compelling for researchers in universities and business schools.

Of course, the kudos that comes with high-level political connections can be attractive to other senior leaders as well.

These interests can be converted into valuable practical support in the form of advice and advocacy, introductions and connections to new people, and resources — sponsorship, funding, materials, etc.

QUESTIONS TO CONSIDER

WHAT OPPORTUNITIES MIGHT DRAW IN
EXCITING PEOPLE AND ORGANIZATIONS,
BRINGING EXTRA CAPACITY?

WHAT GAPS DO YOU HAVE IN SKILLS,
KNOWLEDGE, IDEAS AND RESOURCES
THAT CONNECTING TO OTHERS MIGHT
HELP YOU TO FILL?

HOW WILL YOU STAY OPEN TO
OPPORTUNITIES TO MAKE UNEXPECTED
CONNECTIONS WHILE MAINTAINING
FOCUS ON IMPLEMENTATION?

3. MANAGING INTERNAL AFFAIRS

Middle managers are important 'internal' stakeholders and their support is critical to successful implementation of bold new ideas. Ideas that lack middle managers' support face unhelpful competition for time and resources, so it's critical to make sure managers are on board and on message. Show middle managers how your idea will help them to achieve their goals.

4. THE RIGHT TEAM FOR THE JOB

A team that comes together to develop a new idea may not be the right team to lead implementation; your requirements will change over time. Teams need to grow and diversify as the work progresses. You need passionate and visionary leaders working alongside people who know how to make things work and get stuff done. Either quality on its own is not enough for successful implementation.

5. KEEPING EYES ON THE PRIZE

Progress requires relentless focus to ensure plans are clear and delivery is on schedule. However, merely meeting milestones does not generate and sustain the necessary energy and motivation to keep going. To sustain strength and energy, it is necessary to keep connecting stakeholders to a powerful and compelling vision for the change you want to see in the world. It's that powerful narrative — not the process for achieving your milestones — that inspires the best in everyone and keeps them fighting to bring the idea to life.

QUESTIONS TO CONSIDER

WHO ARE THE MIDDLE MANAGERS OF OTHER DEPARTMENTS WHO CONTROL RESOURCES YOU MIGHT NEED TO ACCESS?

WHO ARE THE MIDDLE MANAGERS MOST LIKELY TO INFLUENCE SENIOR LEADERS?

HOW CAN YOU DEMONSTRATE THE WAYS IN WHICH YOUR IDEA HELPS THESE MIDDLE MANAGERS MEET THEIR TARGETS AND ADDRESS THEIR PRIORITIES?

QUESTIONS TO CONSIDER

WHO ON YOUR TEAM IS RESPONSIBLE FOR THE BIG PICTURE AND VISION?

WHAT KNOWLEDGE AND SKILLS DO YOU NEED ON YOUR TEAM? DO THESE EXIST IN THE POOL OF PEOPLE YOU COULD NATURALLY DRAW UPON, OR DO YOU NEED TO LOOK FURTHER AFIELD?

WHAT ARE THE TRANSITION AND REVIEW POINTS THAT MIGHT MEAN YOU NEED TO MAKE CHANGES TO YOUR TEAM?

QUESTIONS TO CONSIDER

HOW WOULD MEMBERS OF YOUR TEAM DESCRIBE THEIR CONTRIBUTION TO IMPROVING PEOPLE'S LIVES?

HOW MANY PEOPLE KNOW YOUR PLAN FOR IMPLEMENTATION AND HOW EACH OF THE STAGES MOVES YOU CLOSER TO YOUR GOAL?
